Incident Response

Multi-platform for three environments: Mac OS X, Windows, and Linux

- Make forensic images of all internal devices
- Make forensic image of physical memory (32 and 64 bit)
- Determine if disk level encryption is enabled
- One simple to use interface

Acquire live volatile data from Windows systems including

- Physical Memory
- System Logs
- Passwords
- Scheduled Jobs
- Network Connections
- Much MORE!

Computer Forensics

A bootable forensically sound environment to boot any x86 system

- Make forensic images of all devices
- Search filesystems for specific file types (ie Graphic files, Document files, etc)

e-Discovery

Several open source forensic applications to assist with data analysis including cell phone analysis

- Sleuth Kit
- LVM2
- gMobileMedia
- LinEn
- Scalpel
- Gammu
- Libewf + mount_ewf
- Foremost
- Gnokii
- CarvFS
- LibPff
- frag_find
- Cryptsetup
- Volatility
- Pythonraw
- TrueCrypt
- Moto4Lin
- PTfinder
