

ACCESSDATA AND SCARAB ENTER EXCLUSIVE PARTNERSHIP TO PROVIDE FULL-SERVICE EDISCOVERY SOLUTION

AUSTIN, TX, and LINDON, UT – January 31, 2008 – Scarab and AccessData, a pioneer in the digital forensic industry, today announced an exclusive partnership agreement to provide a full-service eDiscovery solution. Scarab is a litigation support technology company focused solely on streamlining the eDiscovery process and reducing associated costs of collection, culling, review and production. This partnership enables corporations and law firms to more efficiently carry out electronic discovery while avoiding claims of spoliation due to improper collections.

“Every electronic file has a unique fingerprint and leaves a distinct trail as it moves through a network. Preserving—then following—that trail and authenticating the “who, what, where, and when” associated with it is what is entailed in computer forensics,” said Tim Kaufeldt, Vice President and Chief Technology Officer for Scarab. “Because electronically stored information can be corrupted or deleted by inexperienced investigators or custodians, cases and clients are placed at risk. Proper collection of all evidence is an essential first step in every case, making an exclusive partnership with AccessData the perfect fit with our service offerings in addition to giving immediate return on investment for our clients.”

AccessData’s forensic technology automates the forensic collection of large volumes of evidence. Then Scarab rapidly culls down and processes the relevant data, automatically eliminating duplicates, near-duplicates and other irrelevant data. Scarab then places the final data in a platform of the client’s choice for review. This partnership provides a unique, seamless eDiscovery solution that greatly reduces eDiscovery costs for every client. “We are responding to the demand for one seamless, cost-effective eDiscovery service that encompasses collection through production,” said Tim Leehealey, CEO of AccessData. “Scarab systematically delivers the quality of service our clients have come to expect, making this partnership an easy decision.”

About AccessData

AccessData, a pioneer in the forensic computing industry, provides solutions and training to empower examiners in law enforcement, federal agencies and corporations to perform thorough investigations with speed and efficiency. AccessData has led the digital investigations industry for twenty years with its password cracking, decryption and forensic technology. AccessData is a recognized leader in the field of digital forensic training and certification with its AccessData Certified Examiners Program (ACE). For more information visit www.accessdata.com.

About Scarab

Scarab is a litigation support technology company focused exclusively on streamlining the eDiscovery process and reducing associated costs. In the eDiscovery industry, Scarab is a unique organization: a process-driven team of consultants and technology integrators customizing solutions for law firm and corporate legal department clients based on their case by case need. Scarab was initially founded to bring high quality solutions to data management problems before, during and after litigation. Through its consulting services as well as trial services, Scarab exhibits a serious ongoing commitment to understanding substantive legal issues and has proactively mastered the critical components of technology and process. By employing only best of class technology matched with an unyielding commitment to clients, the company has succeeded in every way. Scarab now serves clients throughout the United States and Canada from four fully staffed regional offices located in San Antonio, Austin, Dallas and Houston.
