**For Immediate Release**

**AccessData Corporation Releases Update to the Leading  
Computer Forensics Software *Forensic Toolkit***

**Lindon, Utah – December 19, 2005** – AccessData is proud to announce the release of FTK Case Reviewer, a new product designed to compliment and enhance the experience of Forensic Toolkit. Now imagine, increasing your investigation manpower without the learning curve. FTK has become the tool of choice for those involved in computer forensics because of its advanced capabilities and efficient ease of use.

FTK Case Reviewer is a simplified version of FTK that allows patrol officers, legal staffers and other personal to view cases that have already been processed while maintaining warrant privilege. Equipped with an index that allows immediate search results, users may look up and view the contents of cases that have already been created in a “read only” fashion. This allows lead investigators to process cases and then distribute the work load for investigation. Users are able to perform investigations and “bookmark” items of importance for later report generation.

FTK Case Reviewer’s wide range of capabilities make it a perfect fit for anyone who needs to view cases that have already been processed. It is a product that can be used anywhere from the police department to the law office. Officers will now have the ability to search for evidence on suspects in ongoing investigations. As attorney’s go to court at the close of an investigation they will be able to utilize FTK Case Reviewer’s capabilities in order to review the processed case. The smart lay out and ease of access of FTK Case Reviewer will allow the attorney to better organize and understand the facts necessary for the arguments being made in court.

With FTK Case Reviewer, professionals are able to step away from the time consuming stress of complicated research and frustrating paper trails. Once removed from these distractions, investigators and other professionals are able to use FTK Case Reviewer to clearly review facts and research available processed cases. This allows the user to approach their job with an efficiency and effectiveness that those acquainted with AccessData have come to expect. **About AccessData**

AccessData Corporation, a pioneer in the forensic computing industry, provides the tools and training to empower examiners at the local, state, and federal levels as well as corporations to perform thorough investigations with speed and efficiency. AccessData has led the forensic computing industry with its password cracking and decryption technology for over 18 years. In addition, during the late 1990’s AccessData expanded its offering to include the Forensic Toolkit (FTK) which enables investigators to analyze electronic files for evidence including any cracked or decrypted files. AccessData is a recognized leader in the field of digital forensics training and certification with its AccessData Certified Examiners program (ACE), ensuring forensic examiners worldwide follow established standards and guidelines.
